

foamalux

CLEANING

Foamalux is an extruded, closed cell, unplasticised PVC foam sheet.

In order to maintain Foamalux in a good condition it is recommended that the sheet be cleaned periodically using suitable household cleaning agents.

The recommended cleaning instructions are as follows:

- use lukewarm water to rinse and soften dirt
- make up a solution of lukewarm water and ordinary household cleaner or mild soap and use this to wash the sheet
- a sponge or soft cloth should then be used to gently remove dirt and grime
- for large areas a pressure washer may be used
- Isopropyl alcohol used sparingly can be used to remove paint and other such substances
- the cleaning process should then be repeated and the sheet rinsed with clean water and dried with a soft cloth
- It may be beneficial to use an anti-static cleaning product to reduce the frequency of cleaning required.

Warning

The following precautions should be observed:

- do not scrub the sheet with brushes or sharp implements
- do not use squeegees
- avoid solvents, other than those listed, or any abrasive cleaners
- avoid cleaners of a highly alkaline composition
- avoid cleaning in the hot sun or high temperatures
